

Commission Portal

Install & Update Guide

Finance Commission Dashboard · Version 1.2.28 · September 2026

A quick guide for **Windows** and **Mac**. Install once — the Portal keeps itself updated after that.

1 · Download

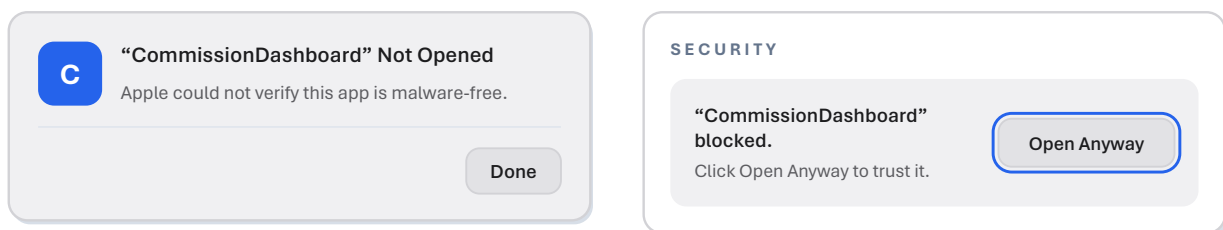

Go to the [Commission Portal download page](#) → **Assets**. **Windows**: download the `.exe`. **Mac**: check your chip first (Apple menu → **About This Mac**) — download the **arm64** build for Apple Silicon (M1 and newer), or **intel** for an Intel Mac.

2 · Install

Windows: open the file. If you see "Windows protected your PC", click **More info** → **Run anyway**, then **Next** → **Install**.

Mac: open the `.dmg`, drag **CommissionDashboard** onto **Applications**, then open it from there.

macOS will refuse the first time — expected, not an error. **Sequoia/Tahoe** (no Open button in the message): **System Settings** → **Privacy & Security** → **Open Anyway**, shown below. **Older macOS**: right-click the app → **Open** → **Open**.

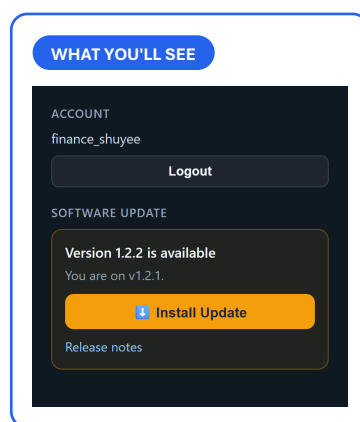

Left: what macOS shows. Right: Privacy & Security → Open Anyway.

3 · Open & sign in

Windows: Start Menu → **Finance Commission Dashboard**. **Mac**: **Applications** → **CommissionDashboard**. Sign in with the **username and password IT gave you** — there is no account to create. **You're done** — steps 1–3 are one time only.

Updating

The Portal checks for updates itself. When one is ready, a **Software Update** box appears at the bottom of the left-hand menu — click **Install Update** and wait; it restarts on its own. Nothing of yours (login, files, edited rates) is touched. Questions? Ask **IT**.

The Software Update panel — click Install Update
